

Strict view: any run with Calmar > 2.05 treated as invalid; missing Sharpe estimated as 0.76×Sortino
(118 TSV rows; strict_invalid = 47 runs)

Per-run coverage (■ recorded valid · □ estimated valid · × recorded invalid (strict: removed=TRUE OR Calmar>2.05) · blank = neither)

Annual return — valid max (under strict rule + estimation): 0.495 (MaxDD missing on 11 of 12 candidate rows → derivation effectively unavailable)
